### **DETAILED ACTION**

The following is a first action on the merits of application serial no. 10/807,649 filed on March 24, 2004.

#### ***Claim Objections***

Claims 8 and 14 are objected to because of the following informalities:

- In claim 8, line 7, before "transmission housing", "a" should be changed to -the-.
- In claim 14, line 2, before "form", -the- should be inserted.

Appropriate correction is required.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 8-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 8 recites the limitation "the translation device" in line 9. There is insufficient antecedent basis for this limitation in the claim.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8, 9, 12 and 13 are rejected under 35 U.S.C. 102(b) as being unpatentable by DE 19927080A1. DE discloses an automatic transmission having several power paths provided in a transmission housing (8) between a transmission input shaft (4) and a transmission output shaft (20) for shifting gears, the gears are depicted with conversion devices (via 10 and 24) that can be hooked up into a power flow via control elements (12, 22), wherein at least one of the conversion devices is at least partially located in the housing such that a radial and tangential (axial force having one point) forces of the gears are directly transmitted to the housing through bearings (26, 28), the control elements are positive elements and the conversion devices have a spur gear pairing wherein a spur gear (24) is located on the bearing and a spur gear (on countershafts not referenced) is located on a countershaft.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 14 is rejected under 35 U.S.C. 103(a) as being unpatentable over DE in view of Hall III ('051). DE discloses an automatic transmission, but does not disclose a summing transmission.

Hall discloses a power transmission having several power flow paths between an input and output shaft wherein a planetary unit (62) is used in the output flow path.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to provide DE with a final planetary drive in view of Hall to vary ratio coverage through selection of the ratios.

### ***Allowable Subject Matter***

Claims 10 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### **FACSIMILE TRANSMISSION**

Submission of your response by facsimile transmission is encouraged. Group 3600's facsimile number is **(703) 872-9326 before final and 703-872-9327 after final**. Recognizing the fact that reducing cycle time in the processing and examination of patent applications will effectively increase a patent's term, it is to your benefit to submit responses by facsimile transmission whenever permissible. Such submission will place the response directly in our examining group's hands and will eliminate Post Office processing and delivery time as well as the PTO's mail room processing and delivery time. For a complete list of correspondence **not** permitted by facsimile transmission, see MPEP 502.01. In general, most responses and/or amendments not requiring a fee, as well as those requiring a fee but charging such fee to a deposit account, can be submitted by facsimile transmission. Responses requiring a fee which applicant is paying by check **should not be** submitting by facsimile transmission separately from the check.

Responses submitted by facsimile transmission should include a Certificate of Transmission (MPEP 512). The following is an example of the format the certification might take:

I hereby certify that this correspondence is being facsimile transmitted to  
the Patent and Trademark Office (Fax No. (703) 000-0000) on \_\_\_\_\_ (Date)

Typed or printed name of person signing this certificate:

(Signature)

Art Unit: 3681

If your response is submitted by facsimile transmission, you are hereby reminded that the original should be retained as evidence of authenticity (37 CFR 1.4 and MPEP 502.02). Please do not separately mail the original or another copy unless required by the Patent and Trademark Office. Submission of the original response or a follow-up copy of the response after your response has been transmitted by facsimile will only cause further unnecessary delays in the processing of your application; duplicate responses where fees are charged to a deposit account may result in those fees being charged twice.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
